

**Consults seen by one NIH ID fellow during a two-month rotation
at the Washington Hospital Center in 2007-08**

Intraabdominal abscess
Bronchitis – renal transplant recipient
Altered mental status – HIV.AIDS
Pulmonary TB
Acalculous cholecystitis
Candida glabrata fungemia
MRSA hand infection
Pneumonia - HIV
Cryptococcal lung mass - HIV
MRSA wound infection - diabetes
MSSA bacteremia/sepsis - cirrhosis
Chronic fever/cough with pulmonary infiltrates
MRSA endocarditis
Pneumocystis pneumonia and eosinophilia – HIV/AIDS
Prophylaxis – HIV/AIDS
Pneumonia – HIV/AIDS
Shortness of breath – HIV
Mycobacterial bacteremia – HIV/AIDS
Post-operative *Staph. epidermidis* hygroma
Leukocytosis
Enterobacter bacteremia
Clostridium difficile colitis
MSSA bacteremia - diabetes
MSSA osteomyelitis – HIV
Fever - pancreatic cancer
MRSA necrotizing fasciitis
Fever/pancytopenia (disseminated histoplasmosis) – newly diagnosed HIV/AIDS
Peritonitis
MRSA bacteremia with septic pulmonary emboli - IVDA
Hernia repair mesh MRSA infection
Sternal osteomyelitis following CABG - diabetes
Serratia/Candida sternal osteomyelitis following CABG
Pseudomonas bacteremia
Pericardial effusion - HIV
Rising creatinine – HIV and renal transplant recipient
Recurrent *E.coli* UTIs - diabetes
Leukocytosis
MRSA soft-tissue infection - HIV and IVDA
MRSA UTI

MRSA osteomyelitis/prosthetic joint infection
MRSA septic arthritis
Infected pancreatic pseudocyst - HIV
Disseminated MAC – HIV/AIDS
Cellulitis
Clostridium difficile colitis
Rheumatic fever antibiotic prophylaxis
Brain hemorrhage, rule out neurocysticercosis
Fever – renal transplant recipient
E. coli post-operative peritonitis
Urinary tract infection – renal transplant recipient
MRSA postoperative abdominal abscess
MRSA prosthetic hip infection
Fever - renal transplant recipient
Purpura fulminans/meningococcemia
Urinary tract infection - renal transplant recipient
Clostridium difficile colitis - renal transplant recipient
Klebsiella oxytoca bacteremia - renal/pancreas transplant recipient
Leukocytosis - HIV
Multiple brain lesions - HIV
Community-acquired pneumonia - HIV
MRSA/ESBL *Klebsiella pneumoniae* soft-tissue infection
Non-healing skin ulcer
MSSA nosocomial pneumonia
Enterococcal bacteremia
Cellulitis
Cellulitis
Clostridium difficile colitis
Serratia bacteremia post-inhalational lung injury
Fever - renal transplant recipient
Serratia bacteremia s/p subdural hematoma evacuation
Meningococcemia - need for prophylaxis for staff
VRE mitral valve endocarditis
VRE bacteremia and *Clostridium difficile* colitis - perirectal abscess
Haemophilus necrotizing fasciitis/bacteremia
MRSA aortic valve endocarditis - IVDA
Community-acquired pneumonia and MRSA septic arthritis - HIV
Sternal osteomyelitis following CABG
Re-initiation of HAART treatment post-surgery
Non-healing diabetic ulcer - renal transplant recipient
Neck abscess after heroin injection in the IJ artery
Fever and hypotension
CMV PCR positivity in CSF from HIV-negative patient with altered mental status

Pleural effusion with pleural-based lung nodules – HIV and renal transplant recipient
UTI - renal transplant recipient
Septic arthritis
Cellulitis at site of saphenous vein graft harvest
Streptococcus pneumoniae endophthalmitis
Recurrent *Clostridium difficile* colitis
Pseudomonas bacteremia and *Candida parapsilosis* fungemia in neutropenia
Fever and leukocytosis
Necrotizing fasciitis - diabetes
Klebsiella pneumoniae bacteremia
Wound infection - diabetes
VRE bacteremia with prosthetic heart valve
LVAD exit site infection with bacteremia
Intraabdominal abscess - ovarian cancer
Staphylococcus lugdunensis aortic valve endocarditis - ESRD
Cryptococcus laurentii arthritis
Cholangitis - pancreatic cancer
Disseminated MAC, encephalopathy – HIV/AIDS
Prior MRSA skin infection - Decolonization
Staphylococcus lugdunensis aortic valve endocarditis with septic embolic
Initiation of HAART in patient with HIV/AIDS
Progressive dementia over 1 year – HIV with CD4 in 700s
